

Change Default Port

Description

I change the default Grafana web server port from 3000 to 443 since we now have an SSL certificate bound.

I use the **iptables** prerouting method

```
sudo iptables -t nat -A PREROUTING -p tcp --dport 443 -j REDIRECT --to-port 3000
```

You can inspect the iptables settings using

```
iptables -t nat -L
```
